

***Online Administration and Management Solution
for Educational Institutions!***

Background

- Educational institutions have now become large and complex organizations and hence managing various activities and resources in such institutions demands significant amount of time, effort and resources from teachers, management and authorities.
- With thousands of students in the school, even functions like keeping track of attendance, recording students examination grades and marks, printing progress reports, admission process, fee collection, time-table generation etc become tedious and time-consuming for the staff involved.
- Faced with such increasingly unmanageable and enormous tasks, schools have started relying on technology solutions in the form of information and management systems to simplify and organize the administrative processes as well as to increase operational and academic efficiency.

Background (contd...)

- Freed from mundane paperwork jobs and provided with necessary tools, teachers will be able to spend time in analyzing students academic records to understand individual strengths and improvement needs thus helping themselves to plan better.
- A forum to collaborate and share would encourage teachers as well as students to create innovative ideas, study materials, project proposals, academic initiatives, peer and study groups etc, leading to better classroom experience and lively school environment.
- Availability of all relevant and necessary information in one place, organized and easily accessible to all concerned, helps the management in decision making and in their drive for attaining better performance and efficiency.

eVidya

- eVidya is a comprehensive 'Online Administration & Management System for Educational Institutions'. It provides a means to collate all information related to the school activities and stake holders, manage them efficiently and act as a good decision support system helping the authorities to take quick and informed decisions.
- An easy-to-use, viable and affordable solution from Trizile Technology Services that helps to manage the administration and academic activities of the institutions better.
- All common functions are made available in the **eVidya-Gold** offering. The institute has the flexibility to buy additional Special modules, available as **eVidya-Platinum** optional modules, on a need basis.
